In regard to a variable quantity, it is taken to mean as qualified - that is, its value is subject to a continual change, either increasing or decreasing. Now this being the case, it is evident that its value must have some rate of increase or decrease, uniform or variable, according to governing conditions. Upon this theory this work is founded, and it is hoped it so clears the way that it can be understandingly followed by those who are so inclined. How is it in regard to a differential, so called, and the process of finding it? First an increment is added to the variable, and finally, in order to obtain...
