Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from *Some Scale Insect Pests of Coffee in South India* Introduction. The Scale Insects or Coccidae form a large group embracing some of the most serious pests of cultivated plants and at the same time including useful forms such as the cochineal and the lac insects. Text-Fig. 1 shows the external structure of one of these insects and may be taken to represent the group in general. The popular name, scale insects, appropriately describes their scab or scale-like appearance. The shape is usually flat and oval but is often obscured by secretions of a resinous or waxy nature and by ovisacs or egg bags at the hind end of the body. There is usually little or no trace of segmentation, the three natural divisions of the body, viz., the head, the thorax and abdomen running into one another. There are three pairs of legs ending in hooks. The eyes are minute black spots near the margin. The mouth is situated between the first pair of legs. The mouth parts consist of four long slender hairs closely approximated to form a tube, along which the plant sap is drawn. When not in use, this tube is withdrawn into a special sac inside the body where it remains in the form of a loop, the sharp point only appearing outside. For the manipulation of the proboscis there are a number of muscles which converge into a small chitinous cradle (see Plate II, Fig.3). The sexes of scale insects are sharply differentiated in the adult stage. The females retain more or less the flat oval shape and are wingless. The males, on the other hand, are provided with a...
