

Proceedings of the American Academy of Arts and Sciences Volume 19

Filesize: 8.88 MB

Reviews

The ebook is not difficult in read through easier to comprehend. Of course, it is perform, nonetheless an interesting and amazing literature. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Dr. Haylee Grimes PhD)

PROCEEDINGS OF THE AMERICAN ACADEMY OF ARTS AND SCIENCES VOLUME 19

To read **Proceedings of the American Academy of Arts and Sciences Volume 19** eBook, make sure you follow the link below and download the ebook or have access to additional information which might be in conjunction with PROCEEDINGS OF THE AMERICAN ACADEMY OF ARTS AND SCIENCES VOLUME 19 book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 176 pages. Dimensions: 9.7in. x 7.4in. x 0.4in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: . . . slit. Focused a Lyrae on the slit. There was blue haze in the atmosphere. The flintier on the slit was moved between the exposures of a Perseus and the Moon, but was not well adjusted, so the two spectra are superposed. Several of these photographs, as stated above, were taken to the Harvard College Observatory in the spring of 1883, when the measurements described below were made. This work may be divided into three parts: first, the determination of the relative positions of the lines in the various spectra in terms of any convenient unit of length; secondly, from the known spectra of the Moon and Jupiter, a determination of the relation of these measures to wave-lengths; thirdly, a reduction of the measures of the stellar spectra to wave-lengths, and a discussion of the results. The measures were made with the micrometer described in the Annals of Harvard College Observatory, VIII. 42. The photograph was moved under a microscope by a micrometer screw having a pitch of 1/10 of an inch. By turning the screw, the lines were brought to coincide with the end of a hair in the field of view of the microscope, and the position was determined by the divided head of the screw. As is usual when examining photographs, very low powers were essential, or much of the finer detail would be lost. The best results were attained with an eyepiece and objective, each equivalent to a lens of about 2...
