Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 Excerpt: .of western Arkansas, unless possibly the imperfectly known fauna of the Eutaw or Tombigbee sand of Mississippi belongs to its latest phase. However, so little is known of the fauna of the overlying Taylor marl that an attempt at exact correlation would be premature, especially as investigations are now being conducted in that region. VERTEBRATES. Teeth and fragmental bones of vertebrates occur in places in the Exogyra ponderosa zone in the eastern Gulf region. The following species of fish have been identified: Fish remains from Exogyra ponderosa zone. Enchodus? petrosus Cope (identified by J. W. Gidley). Ptychodus martini Williston? Hemiptychodus mortoni Mantell. Corax falcatus Agassiz (shark). Lamna texana Roemer (shark). Otodus appendiculatus Agassiz (shark). Ischyrohiza mira Leidy (identified by J. W. Gidley). The 5 first-named forms have a wide vertical range and are of no value in close correlation. The species Ptychodus martini Williston? and Hemiptychodus mortoni Mantell are limited in range in the eastern Gulf region to the Mortonicerias subzone; in the western interior region, these species occur in the Niobrara formation, but are not known above that formation. These forms may prove of value in correlating the eastern Gulf Cretaceous with that of the western interior, although at present their ranges can scarcely be said to be known with sufficient definiteness to permit confident correlation. i Hyatt, Alphous, Pseudocerasites of the Cretaceous: Mon. U. S. Geol. Survey, vol. 44, 1903, p. 206. Stanton, T. W., Succession and distribution of later Mesozoic invertebrate faunas in North...
